"Characterization of double-stranded RNA genetic elements associated "Characterization of double-stranded RNA genetic elements associated with biological control of chestnut blight; organization of terminal domains and identification of gene products.";

EMBO J. 8:657-663 (1989).

-I- MISCELLANEOUS: DOUBLE-STRANDED RNA GENETIC ELEMENTS ARE ASSOCIATED WITH BIOLOGICAL CONTROL OF THE FUNGAL DISEASE CHESTNUT BLIGHT.

THIS DS-RNA ARE ASSOCIATED WITH HYPOVIRULENCE. THEY ARE LOCALIZED IN THE CYTOPLASM.

-I- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C7.
                                                                                                                                                                                                                                                                                                                                                                    p10941;
